# Pramod Chundury

cvspramod@gmail.com +1 (240) 620 - 5063 https://pramodoro.com/

Mixed-methods UX researcher and research engineer combining qualitative research, behavioral analytics, and technical prototyping to inform product decisions across complex enterprise and AI-powered systems. Contributed to shipped product features at Meta, enterprise tools at Ericsson, and clinical analytics interfaces. Currently designing, implementing, and evaluating AI-agent workflows using SoundHound AI. Published researcher with nearly 500 citations and active involvement in the HCI research community through peer reviewing, program committee service, and event organization.

## Experience

**Tixy Tech**, Hyattsville, MD, USA | **Research Engineer** Aug 2026 - Present

- Partner with business teams to design and implement agent-powered conversational assistants using the SoundHound AI platform, translating business requirements into agent goals and workflows.
- Configure AI agents and develop backend workflow logic, including Groovy scripts, prompt instructions, and task-specific agent behaviors.
- Evaluate agent workflows before production deployment through simulated user interactions, task-completion testing, and analysis of agent execution logs to identify failures and improve reliability.

**Data and Design LLC**, Davidsonville, MD, USA | **Data Scientist/Visualization Researcher** Jan 2026 - Aug 2026

- Analyzed badge-in/badge-out mobility datasets across major U.S. metro areas to produce weekly workforce analytics reports and visual summaries for executive and publication-facing audiences.
- Developed Python-based data processing and JavaScript-based visualization workflows to support recurring analysis, reporting, and communication of workforce mobility trends.

**University of Maryland**, College Park, MD, USA

**Mixed-Methods Researcher (UMD Language Science Center)** Apr 2026 - Aug 2026

- Co-led qualitative analysis of video recordings, transcripts, interviews, and participant-marked misalignment moments to identify how communication breakdowns emerge and are repaired in mixed-neurotype teams.

**Mixed-Methods Researcher (College of Information)** Jun 2025 - Dec 2025

- Led co-design sessions with blind and low-vision participants, cultural heritage experts, and Library of Congress stakeholders to define requirements for richer access to visual collections.
- Evaluated human-AI workflows for semi-automated image description using LLMs, identifying tradeoffs among automation, user control, and output quality.

**Doctoral Researcher** Aug 2018 - May 2025

- **Accessible Data Experiences:** Led foundational research, surveys, co-design, and mixed-methods evaluations to understand how blind and low-vision professionals explore, interpret, and analyze data.
- Designed and developed TactualPlot, a multimodal data exploration prototype combining touchscreen interaction, sonification, and speech, and evaluated it against screen-reader and tactile-display systems to assess task performance, accuracy, workload, and usability.
- **Human–AI Workflow Research:** Conducted qualitative research for Adobe Research on human-AI creativity, identifying challenges related to user control, iteration, and trust to inform AI-assisted creative tools.
- **Complex Data Tools and Behavioral Analytics:** Conducted usability research and clickstream analysis for POD-Vis, a clinical visual analytics platform, comparing users' navigation paths against optimal task-completion paths to identify interaction inefficiencies.
- Analyzed clickstream data to assess usage of contextual help features and support the evaluation of research-informed onboarding and interface improvements.
- **Causal Data Visualization:** Led a crowdsourced study on causal visualizations and contributed to CauseWorks, translating research findings into narrative explanation features that supported interpretation of complex cause-and-effect relationships.
- Applied AI-assisted workflows to qualitative coding, research synthesis, analysis scripting, and interactive prototyping.

**Meta Inc.,** Menlo Park, CA, USA | **User Experience Researcher** Apr 2018 - Jul 2018

- Led evaluative research on Facebook App navigation features using UserZoom, identifying usability and comprehension issues that drove design changes and contributed to the launch of Targeted Tabs across the app.
- Supported a rolling research program that enabled Facebook product teams to evaluate new features and design iterations weekly, accelerating feedback cycles and informing product decisions.
- Collaborated with cross-functional product teams to translate behavioral observations, video analysis, and usability findings into actionable design recommendations for navigation and notification experiences.

**University of Washington**, Seattle, WA, USA | **Research Associate** (Remote) Sep 2017 - Mar 2018

- Designed and evaluated accessible smartwatch interaction prototypes for users with upper-body motor impairments, identifying input techniques that reduced precision demands on small screens.
- Developed an Apple Watch prototype in Swift to compare touchscreen and bezel-based input, enabling controlled evaluation of speed, accuracy, and accessibility tradeoffs.

**Ericsson**, Manchester, NH, USA | **User Experience Intern** May 2016 - Dec 2016

- Conducted stakeholder interviews with network planners and engineers to identify workflow bottlenecks and usability challenges in Ericsson Adaptive Inventory, an enterprise infrastructure management platform.
- Collaborated closely with business users, designers, and engineers to translate research findings into product features and interface improvements.
- Developed table-based and node-link visual analytics concepts to help technical users inspect inventory relationships and navigate complex infrastructure data.

**University of Maryland, College Park,** MD, USA | **Research Assistant** Mar 2016 - Dec 2016

- Co-led qualitative research on drone privacy and security, examining how physical design and behavior influenced trust, comfort, and perceived risk.
- Developed an iPad-based drone interaction prototype and conducted controlled sessions to evaluate user perceptions of privacy-sensitive scenarios.

**Deloitte Consulting USA,** Bengaluru, KA, India | **Application Developer** Jun 2011 - May 2015

- Developed ERP workflows and data integration business tools across five multinational client engagements.

## Education

**Ph.D. in Information Studies** Aug 2018 - May 2025
University of Maryland, College Park, MD, USA
*Advisors: Dr. Jonathan Lazar and Dr. Niklas Elmqvist*

**M.S. in Human-Computer Interaction** Aug 2015 - May 2017
University of Maryland, College Park, MD, USA
*Advisors: Dr. Marshini Chetty and Dr. Leah Findlater*

**B.E. in Computer Science** Jun 2007 - Apr 2011
Anna University, Chennai, TN, India

## Technical Skills

**Research Methods:** Mixed-methods research, foundational discovery, usability testing, interviews, surveys, co-design, experimental design, qualitative coding, thematic analysis, research synthesis, behavioral analytics, clickstream analysis.

**AI and Agent Development**: AI-agent workflow design and implementation, SoundHound AI, prompt engineering, Groovy scripting, agent testing and evaluation, execution-log analysis, LLM-assisted research and prototyping.

**Programming, Frameworks and Data Analysis:** Python, JavaScript, SQL, HTML/CSS, Swift, Pandas, D3.js, Vega-Lite, Matplotlib, scikit-learn, Flask, Apache Cordova, Web Audio API, OpenCV.

**Research and Design Tools:** Figma, UserTesting, UserZoom, SPSS, Tableau, Git, VS Code.

**Accessibility and Multimodal Systems:** Accessible data visualization, WCAG, screen-reader-aware design, sonification, tactile interfaces, refreshable braille displays.
